

Nova Communications Offers SD-WAN-as-a-Service to SMBs

Nova Communications Helps SMBs Utilize Advanced Virtualization Technology to Increase Office Productivity

PLYMOUTH, MN – April 2019 - Nova Communications a leading managed technology services provider (MTSP), announced today that the company now offers SD-WAN-as-a-Service to their small to mid-sized business (SMB) customers. SD-WAN is a leading technology and according to research firm Gartner, “by the end of 2019, 30% of enterprises will deploy SD-WAN technology in their branches.” The reason for the technology’s rise in popularity is due to its simultaneous capacities to increase productivity within an organization while also reducing the total cost of ownership.

To define the term, SD-WAN is an acronym for software-defined networking in a wide area network (WAN). SD-WAN simplifies the management and operation of a WAN by separating the networking hardware from its control mechanism. This concept is similar to how software-defined networking implements virtualization technology to improve data center management and operation. A key application of SD-WAN is to allow companies to build higher-performance WANs using lower-cost and commercially available Internet access, enabling businesses to partially or wholly replace more expensive private WAN connection technologies such

as Multiprotocol Label Switching (MPLS). SMBs that need to scale up or scale down quickly, or need to run multiple remote offices or would like greater visibility into their networks can benefit greatly from this technology.

“The organizations that we work with are always looking for these kinds of breakthroughs,” stated Pete Jones, Owner/President of Nova Communications. “SD-WAN enables an unprecedented level of flexibility and in today’s volatile marketplace, the ability to scale up or down is simply a must-have.”

Nova Communications is also a Member of Technology Assurance Group (TAG), an organization of managed technology services providers, who collectively deliver over \$350M of products/services to the marketplace. TAG operates in 136 cities and serves over 400,000 customers, which affords them access to best practices and knowledge for deploying SD-WAN effectively and efficiently. They also leverage their collective buying power to offer better pricing to end-users.

“Business owners just want their technology to work,” added Jones. “SD-WAN is the best way for us to help all of the underlying technology within in an organization work even better. We’re very excited about offering SD-WAN-as-a-Service because it enables us to help companies be flexible and nimble when they have to respond to today’s extremely fast-paced environment. The marketplace now demands mobility, rapid scaling or descaling capabilities and impenetrable

security, and SD-WAN is the perfect fit.”

ABOUT NOVA COMMUNICATIONS

Nova Communications is Minnesota’s largest and most experienced Toshiba and Zultys dealer. Telecommunications runs your business. The team at Nova Communications has a history dating back to the early 1980’s. Nova Communications does not just provide telephone system equipment and service; we provide a stake in the business of our customers. We learn their business and work with them to ensure they are receiving the very best value. Our goal is a lifelong partnership. The company’s goal is maximum customer satisfaction through total customer satisfaction.

Nova Communications provides customers with industry leading technology, serviced by Factory Certified technicians with years of experience. Customer training is offered for every component of the phone system by Nova Communication’s highly experienced team.

The company’s trusted and professional technicians offer service to ensure system reliability. Nova Communications also offers comprehensive emergency service 24 hours a day, 7 days a week guaranteed within 2 hours.
